Python Lab exercise- 4

1. Write a program to read roll numbers and marks of 4 students and create a dictionary from it having roll numbers as keys
2. Given a dictionary M which stores the marks of students of class with roll numbers as keys and marks as the values. Write a program to check if anyone has scored marks as 85
3. Write a program to input a roll number and marks and update the value of the roll number
4. Write a program to input 2 lists which has keys and values respectively. Create a dictionary from the 2 lists
5. Write a program to read a roll number and delete that roll number. Display a message if the key does not exist
6. Write a program to delete the items of a dictionary in LIFO order. After the last element display a message
7. Write a program to create a dictionary which has integers as the values. Display the sum, maximum and minimum of the values
8. Write a program to create a dictionary with 10 keys (0 to 9) each having values as 200.Update the first and last values by adding 200 to each of them and print the dictionary
9. Write a program to read a sentence and create a dictionary with keys as the characters of the input string and values as the occurrence of characters in the input string
10. Write a program to merge the contents of one dictionary to another
11. Create a dictionary “odd “ of odd numbers between 1 and 10, where the key is the decimal number and the values is the number in words. Perform the following options on this dictionary
    a. Display the keys
    b. Display the values
    c. Display the items
    d. Find the length of the dictionary
    e. Check if the key 7 is present
    f. Check if the value “two” is present
    g. Delete the item from the dictionary corresponding to the key 9
12. Create a dictionary whose keys are monthnames and values are the number of days in the corresponding months
    a. Input a month and display the value for that month
    b. Print out all the keys in alphabetic order
    c. Print out all the months with 31 days
    d. Print out the key-value pairs sorted
13. Create a dictionary d1 and then create another dictionary d2 where the values of d1 should be the keys and keys should be the values
